

2002

**CUSTOMER-BASED GENERATION**

**CALL FOR TENDERS**

**REVISED TENDER FORM – ATTACHMENT C**

**CONTRACTED CAPACITY**

**(Revised 17 February 2003)**

*Instructions:*

- *Remove Attachment C from the Revised Tender Forms issued on 3 December 2002 and replace with the revised Attachment C issued 17 February 2003.*
- *For Bidders who do not elect to be subject to the Hydrology Adjustment:*
  - *Part I of Appendix 2 should be completed with the average annual Contracted Capacity to be delivered in each year of the Term of the Electricity Purchase Agreement (“EPA”) commencing at COD.*
  - *Contracted Capacity profiles may be flat for the Term of the EPA, or may reflect an increasing or decreasing Contracted Capacity over the Term but subject to the following limitation.*
  - *The minimum average annual Contracted Capacity stated in Part I of Attachment C must be not less than 50% of the maximum average annual Contracted Capacity specified in Part I of Attachment C, before giving effect to the one time 20% recall option.*
  - *Part II of Attachment C should be completed with the percentage of the average annual Contracted Capacity expected to be delivered in each month. The numbers inserted in that Table must average to 100% when weighted by the number of days in each month.*
  - *For purposes of clarification, there is no restriction on the percentage a bidder may insert in any month in Part II of Attachment C other than the restriction in the immediately preceding instruction (i.e. bidders may insert 0% for one or more months in Part II of Attachment C provided that all of the numbers inserted in that Table average to 100% when weighted by the number of days in each month).*
- *For Bidders who elect to be subject to the Hydrology Adjustment:*

- *For all years in which the Bidder is selling less than the full output of the Seller's Plant to BC Hydro (including any projects with GBL), the instructions set out above are applicable.*
- *For all years in which the Bidder is selling the full output of the Seller's Plant to BC Hydro (and have no GBL), the following instructions are applicable:*
  - *Part I of Attachment C should be completed using a reasonable estimate for the average annual capacity, expressed in MWh/h, that the Seller's Plant is expected to deliver based on the expected average annual water flow.*
  - *Part II of Attachment C should be completed with the percentage of the amount stated in Part I expected to be delivered in each month of the Term based on the expected average water flows for each month.*
