

BC Hydro Extension Policy Changes

Workshop for Vancouver
Island Developers and
Consultants

February 1, 2007

Agenda

- Introduction
- Regulatory Framework
- Terminology
- Existing Extension Policy
- Drivers for Change
- Straw Model

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

January 11, 2007

BChydro 

2

Objectives

- BC Hydro would like to:
 - > Present the drivers for changes to our extension policy
 - > Summarize our experience with the existing policy
 - > Propose a straw model for a new policy
 - > Obtain comments from our stakeholders
- Our Stakeholders are invited to:
 - > Share their experiences with the existing policy
 - > Provide input into the formulation of a new policy

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Introduction

- BC Hydro is filing a Rate Design Application (RDA) with the BCUC on March 15, 2007
- The filing will include an update to our Extension Policy, as well as revisions to some rates and cancellation of obsolete rates
- The BCUC will be conducting a proceeding to review the RDA
- BC Hydro would like input from our customers prior to making our application to the BCUC
 - > FACOS and Rate Rebalancing workshops
 - > Large Commercial Tariff workshops
 - > Distribution Extension workshops
 - > E-Plus survey
 - > Additional 1:1 meeting with interested customers

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Regulatory Framework

- Why do we charge customers to connect to the grid?
 - > Long-standing principle that customers should pay the cost of their service connection
 - > An offset to extension costs by way of an allowance from BC Hydro is appropriate if the new load will provide sufficient long-term revenue

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Terminology

- Connection Fee:
 - > New customer pays full cost for line drop and meter installation, with no utility offset
 - > BC Hydro pays for meter cost
- Extension Fee:
 - > Customer is charged full cost of construction, plus upstream System Improvement (SI) fees, less applicable allowance from BC Hydro

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Terminology

- Offset or Allowance
 - > An allowance provided by the utility that reduces the customer's Extension Fee.
- Customer Contribution
 - > What the customer pays for the construction of facilities. Equals the Connection Fee plus the Extension Fee. Can be Contribution in Cash and/or Contribution in Kind.

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Existing Policy

- Extension Fee =

Construction cost of extension
+ upstream Distribution SI
+ upstream Substation SI
- Maximum Terminal Value
- other allowances
- Revenue Margin allowance

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Existing Policy

- Upstream Distribution SI
 - > \$ per kW per km of line from substation
- Upstream Substation SI
 - > \$ per kW
- Maximum Terminal Value
 - > Lesser of “salvage value” or revenue margin of years 11 to 40
- Revenue Margin
 - > NPV of 10 years of revenue margin (gross revenue less costs).
- Other Allowances
 - > System Reinforcement, Depreciation, Telus

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Existing Policy

- Rationale:
 - > Existing customers' rates should not go up due to the addition of new customers
 - > For each customer the net margin is calculated by subtracting incremental costs from incremental revenues.
 - > Customers with a positive net margin can use that amount to offset the extension cost.
 - > Customers with a negative net margin pay that cost.

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Existing Policy Example: 60 lot subdivision

ESTIMATED REVENUE:

# OF ACTS	UG/ OH	TYPE	SERVICE VOLTAGE	ESH Y/N	SW AMPS	ANNUAL LOAD KW	LOAD FAC%	AVG MONTH DEMAND %KW	ANNUAL ENERGY KW.H
60	1101 U	A	120/240	Y	200	10.60	21	0	19,500
45	1101 U	E	120/240	Y	100	3.00	21	0	5,519

SYSTEM EXTENSION TEST

DESCRIPTION OF EXTENSION:

SUBSTATION:	SQH	LINE VOLTAGE:	25
SUBDIV. INFILL:	80%	# OF ACCTS:	105
ANNUAL ENERGY:	1,418,355 KW.H	FEEDER CF:	45%
DIST. FROM SS:	O/H	U/G	
	FEEDER	0.1 KM	0.3 KM
	TRUNK	5.0 KM	0.3 KM
	3PH BR	0.2 KM	2.0 KM
	1PH BR	0.0 KM	0.0 KM
	EXT LENGTH	0 M	1,050 M

REVENUE MARGIN (PV OVER 10 YEARS AT 8% DISCOUNT RATE):

ANNUAL ENERGY REVENUE	\$51,336
LESS:	
COST OF ELECTRICITY	\$25,631
UPSTREAM TRANSM COST	\$1,109
NET OPERATIONS & MAINT	\$527
SCHOOL TAX	\$303
GRANTS IN LIEU OF TAX	\$513
CAPITAL TAX	\$1,243
RETAIL COST	\$2,299

TOTAL DEDN FROM ENERGY REV	\$31,624
REVENUE MARGIN	\$19,711
PV 10 YEAR REVENUE MARGIN {A}	\$132,262

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Example: 60 lot subdivision

CONSTRUCTION COST:		
TOTAL CONSTRUCTION COST	\$590,007	
DISTRIBUTION SYSTEM IMPROVEMENT COST	\$6,403	
SUBSTATION SYSTEM IMPROVEMENT COST	\$17,086	
REFUND PROCESSING COST	\$125	

SUB TOTAL OF CONSTRUCTION & SET CHARGES	\$613,622	
LESS:		
CHARGES EXPT FROM SET	\$400	
SALVAGE	\$0	
DEPRECIATION (SHARED)	\$0	
SYSTEM REINFORCEMENT	\$72,225	
TELUS CONTRIB'N	\$0	
CONNECT CHARGE (DED)	\$9,422	
OTHER ALLOWANCE	\$0	
MAX TERM VALUE	\$102,794	
INFILL REFUND	\$0	
UEA	\$0	

TOTAL CREDITS/ADJUSTMENTS	\$184,841	
NET CONSTRUCTION COST {B}		\$428,781

NET MARGIN {A-B}		(\$296,519)
NET MARGIN {A-B}		(\$296,519)
EXTENSION FEE		\$296,519
PLUS CUSTOMER SHARE OF UEA		\$0
PLUS CONNECTION CHARGE (DEDICATED FACILITIES)		\$9,422
LESS DEPRECIATION (DEDICATED)		\$0
PLUS CHARGES EXEMPT FROM SET		\$400
PLUS CIC ADJUSTMENT/STANDARD CHARGE		\$0
PLUS CONTRIB IN KIND ADJUSTMENT		\$0
NET CUSTOMER CONTRIBUTION IN AID OF CONSTR.		\$306,341
LESS CUSTOMER CONTRIBUTION IN KIND		\$138,508
CUSTOMER CONTRIBUTION IN CASH		\$167,833
GST ON CONTRIBUTION IN CASH (@6.00%)		\$10,069.98

NET CUSTOMER PAYMENT		\$177,902.98

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Existing Policy

- Pioneer Refunds
 - > Initial allowance based on known loads
 - > If an extension fee is paid, can apply for refund in first 5 years based on additional loads that connect.
 - > Residential subdivisions can get upfront allowance based on BC Hydro's assessment of the infill rate.
 - > No refund for "extension to an extension"
- Eligibility for Allowances:
 - > Only BC Hydro owned extensions, expected to be shared by *other new* customers in the future, are eligible for BC Hydro contribution
 - > Private property generally not eligible
 - > Strata / malls not eligible even though they serve more than one end-use customer

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Drivers for Change

- Current policy sets BC Hydro contribution to a new customer extension at the NPV of the net revenue margin of that new customer
 - > Based on incremental cost approach, new customers are assessed the incremental cost of serving them, including the incremental cost of energy.
 - > If the current incremental cost of energy is used in the existing policy, customers would not receive any allowance.
 - > This approach is inconsistent with the heritage contract – all BC Hydro customers are entitled to heritage energy.

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Drivers for Change

- Feedback from Customers
 - > Very complex calculations
 - > Unfair to private property
 - > Should allow “extension to an extension” refunds
- Improvements Needed
 - > Remove perceived subsidy for electric heat
 - > Fairer treatment for facilities on private property
 - > More flexible pioneer refund policy
 - > Simplify System Improvement (SI) charge

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Straw Model

- No change to Connection Fee, except updated pricing
- Extension Fee equals the cost to construct the extension less an allowance
- SI fee eliminated except for cases where the extension triggers high upstream costs (e.g. a substation upgrade, a new substation).
- Allow private property extensions to be eligible for offset allowance
- Offset allowance equivalent to 20 years of wires-related revenues for each customer class.

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Straw Model

- Using current cost of service model, allowances would be:
 - > \$1950 per residential customer
 - > \$450 per kW for commercial
- BC Hydro allowance is the same for all residential dwelling units – large or small, electric or gas heated.
- Revenue Guarantee may still be taken to secure BC Hydro contribution (no change from status quo).
- Optional Facilities (dedicated backup) charged at full cost to customer (no change from status quo).
- Residential subdivision upfront refund – no change from status quo.
- Upfront automatic refund – raise \$3,000 threshold.

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Example 1

	Existing	SET with No Rev Allow.	Proposed
60 lot subdivision, 80% infill, 45 unit apartment			
Construction Cost	\$590,007	\$590,007	\$590,007
Less Allowance 105 units x \$1950 x 80%			163,800
Extension Fee:	296,519	603,674	344,160
Add: Dedicated/Service Connection	9,822	9,822	9,822
Less: Contribution in Kind	138,508	138,508	138,508
Customer Payment	167,833	474,988	215,474
Allowance per customer	2,014	0	1,560

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Example 2

	Existing	SET with No Rev Allow.	Proposed
61 unit Strata Townhouse, gas heat			
Construction Cost	\$146,208	\$146,208	\$146,208
Less Allowance 61 units x \$1950			118,950
Extension Fee:	0	43,077	13,477
Add: Dedicated/Service Connection	112,730	112,730	4,830
Less: Contribution in Kind	10,797	10,797	10,797
Customer Payment	\$101,933	\$145,010	\$7,510
Allowance per customer	1,231	0	1,950

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Example 3

	Existing	SET with No Rev Allow.	Proposed
40 unit Apt plus Gen Acct, elec heat			
Construction Cost	\$40,759	\$40,759	\$40,759
Less Allowance 40 x \$1950 + 24 kW x \$450			88,800
Extension Fee:	0	\$32,563	0
Add: Dedicated/Service Connection	17,906	17,906	12,005
Less: Contribution in Kind	0	0	0
Customer Payment	\$17,906	\$50,469	\$12,005
Allowance per customer	1,688	0	2,166

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Example 4

		Existing	SET with No Rev Allow.	Proposed
57 lot subdivision, elec heat, 90% infill				
Construction Cost		\$217,025	\$217,025	\$217,025
Less Allowance	57 x \$1950 x 90%			100,035
Extension Fee:		65,125	\$242,223	95,702
Add:	Dedicated/Service Connection	10,842	10,842	0
Less:	Contribution in Kind	37,082	37,082	37,082
Customer Payment		\$38,885	\$215,983	\$58,620
	Allowance per customer	2,220	0	1,755

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Straw Model

- Infill Refunds – allow “extension to extension”

Extension C may contribute to both A and B

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Impact of Proposed Changes

- < 2% difference in total customer contribution
- No impact on rates
- Increased benefit to private property construction
- Increased benefit to high density loads
- Increased benefit for infill refunds
- Reduced benefit for electric heat and residential subdivisions

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Next Steps

- BC Hydro will be considering comments/feedback from stakeholders in drafting its RDA application.
- Application will be filed no later than March 15, 2007.
- BCUC will commence a public proceeding to review the RDA
- All information regarding the review/proceeding will be on BC Hydro's and BCUC's websites.

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.

Feedback

- BC Hydro is seeking your input on the following issues:
 - > The proposal to change how private property is treated;
 - > The proposal to treat gas and electrically heated houses the same;
 - > The proposal to change how infill improvements are treated;
 - > The proposal to leave unchanged the revenue guarantee process;
 - > The proposal to eliminate System Improvement fees (except for extensions that trigger high upstream costs);
 - > Is the proposed policy easier to understand?
 - > Any other comments on the extension policy?
 - > Any other comments on other BC Hydro rate design issues?

Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations. Reliable power, at low cost, for generations.
