

MONITORING, TARGETING AND REPORTING

Equip yourself free-of-charge with a real-time monitoring system to watch your company's energy savings grow.

Monitoring, Targeting and Reporting (MT&R) is a proven method for monitoring your energy performance, setting targets for future demand, and reporting the results to your team. Essentially, it's a system that puts minute-to-minute information in the hands of the people who need it—all to help you and your team hold on to your energy savings and identify whole new ways to save.

Power Smart can help you to build your own customized MT&R system and train your employees to make it a success. We provide fully funded workshops and substantial implementation funding of over \$50,000 to take you through every stage of the process.

If you're committed to continuous energy improvement at your facility, you'll come to see MT&R is an indispensable tool.

IS THIS INITIATIVE FOR YOU?

We designed this initiative for BC Hydro industrial customers who meet the following qualifications:

- You currently use more than 10 gigawatt hours per year at your site (about \$500,000 of electricity annually).
- You are participating in our Industrial Energy Manager initiative.

KNOWLEDGE IS POWER

Gain an invaluable, minute-to-minute understanding of your energy consumption.

CONTINUOUS IMPROVEMENT

MT&R is a critical tool for growing your energy savings year after year.

TARGET WASTE

Detect and eliminate problems in your systems as they happen for optimal performance.

HERE'S WHAT WE OFFER

We provide support and funding throughout all four phases of your MT&R development.

PHASE 1: ASSESSMENT

We take an initial look at your system to define the necessary changes that will be needed for the new system.

- Includes a fully funded workshop, valued at \$8,000, for the team who will be working on the project. You'll get hands-on training with real consumption data.
- You'll also be equipped with a free assessment of your installed metering and a preliminary review of your performance data.

PHASE 2: STUDY AND PLANNING

We assist you in designing a custom MT&R system for your operation.

- 100 per cent funding for the study and planning process, up to \$20,000.
- Includes an implementation plan and a cost-benefit analysis to help you build a solid business case.

PHASE 3: IMPLEMENTATION

We provide funding and guidance for you to fully implement the new system.

- Additional funding of up to \$30,000 for metering equipment, statistical model development, software, employee training, and the integration of MT&R into your existing management systems.

PHASE 4: CONTINUOUS IMPROVEMENT

The final stage is when you begin to see the power of MT&R for yourself.

- Your team will get invaluable insight from real-time reports to maintain optimal performance and discover new ways to grow your energy savings.
- Start to drive consumption downward by setting realistic, achievable targets that are within your control.
