

Ladder safety at home for the holidays

	Ladders will conduct electricity. Keep away from power lines.
---	---

Minimum 1 metre (3 feet) above roof surface

Ladders should only be placed against stable surfaces.

Make sure the two sections of an extension ladder overlap according to the manufacturer's instructions

Check that all locks on the ladder are properly engaged.

If you don't tie off your ladder and stake it to the ground, you should have someone else hold the bottom of the ladder so that it doesn't move.

For every 4-up, place the ladder base 1-out from the wall
