Patrick Wruck Commission Secretary and Manager Regulatory Services British Columbia Utilities Commission Suite 410, 900 Howe Street Vancouver, BC V6Z 2N3

Dear Patrick Wruck:

RE: British Columbia Utilities Commission (BCUC or Commission)
British Columbia Hydro and Power Authority (BC Hydro)
Annual Reporting of Reliability Indices Annual Response to Directive 26 of BCUC Decision on F2005/F2006 Revenue Requirements Application (F05/F06 RRA)

BC Hydro writes to provide an annual reporting of reliability indices, as required by Directive 26 of BCUC Order No. G-96-04 on BC Hydro's F05/F06 RRA.¹

Directive 26 states that BC Hydro is expected to present reliability indices (SAIFI, SAIDI, CAIDI, ASAI, SARI, MAIFI, generation forced outages, availability, and generation outage rates), both combined and disaggregated (where applicable), on an annual basis with comparisons to the Canadian Electricity Association averages. The Canadian Electricity Association became Electricity Canada on March 1, 2022, and is therefore referred to as Electricity Canada in this report.

In this filing, BC Hydro is providing reliability indices for distribution, transmission and generation performance through fiscal 2023. As in previous years, BC Hydro's reliability statistics are provided on a fiscal year basis and are compared with Electricity Canada calendar year data.

BC Hydro submitted its initial distribution and generation reliability indices compliance filing in September 2005, and subsequently reported the available reliability indices in May 2006 as part of the F2007 to F2008 Revenue Requirements Application. Starting in May 2007, BC Hydro began filing annual reports with the BCUC on these reliability indices. Transmission system reliability indices for the years prior to fiscal 2012 were provided separately by the British Columbia Transmission Corporation (BCTC) in its Transmission System Capital Plan filings. BC Hydro provided the transmission system reliability indices starting in fiscal 2012, subsequent to the integration of BC Hydro and BCTC in fiscal 2011.

Annual Reporting of Reliability Indices Annual Response to Directive 26 of BCUC Decision on F2005/F2006 Revenue Requirements Application (F05/F06 RRA)

Page 2 of 3

Distribution and Transmission Update

The most recent annual Electricity Canada reports for distribution and transmission performances are the 2021 Annual Service Continuity data on Distribution System Performance in Electrical Utilities and the Bulk Electricity System. Electricity Canada data on distribution and transmission performance for the 2022 calendar year are not yet available. The comparative reliability indices, both combined and disaggregated, for BC Hydro's distribution and transmission systems, are presented in Attachment 1, in tabular and graphical form through to fiscal 2023.

In the 2021 Annual Service Continuity Distribution System Performance report, Electricity Canada restated the fiscal 2018 and 2020 reliability indices due to late data submissions for the benchmark study.

Generation Performance Update

The most recent annual Electricity Canada report on generation performance is the 2021 Generation Equipment Status Annual Report. Electricity Canada data on generation performance for the 2022 calendar year are not yet available.

The comparative reliability indices, both combined and disaggregated, for BC Hydro's generation system are presented in Attachment 2, in tabular and graphical form for the ten-year period ending fiscal 2023.

To reflect BC Hydro's investment strategies and operating practices of prioritizing Key Generating Facilities (large MW capacity units) over Available Generating Facilities (small MW capacity units), weighted averages of the reliability indices are also included in Attachment 2. Electricity Canada weighted average failure rate was not available at the time of submission.

Reliability Indices Performance Highlights

BC Hydro highlights the following with regard to its reliability indices performance through fiscal 2023:

- BC Hydro's SAIFI results continue to perform better than the Electricity Canada average;
- BC Hydro's average SAIDI performance from fiscal 2014 to fiscal 2023 is 6.45 hours and is better than the Electricity Canada average SAIDI of 6.90 hours;
- BC Hydro's transmission system reliability performance improved while overall reliability performance declined slightly in fiscal 2023 compared to fiscal 2022 due to higher distribution outages;

Applied Proporting of Poliability India

Annual Reporting of Reliability Indices Annual Response to Directive 26 of BCUC Decision on F2005/F2006 Revenue Requirements Application (F05/F06 RRA)

Page 3 of 3

- For generation, all aggregate reliability measures except Forced Outage Count improved slightly in fiscal 2023 compared to fiscal 2022;
- On average, BC Hydro's availability factor is lower than the Electricity Canada average by 5%to 7% as BC Hydro spent more time than the Electricity Canada average on planned outages; and
- The 60-Month Rolling Forced Outage Factor for Key Facilities, which is included as one of BC Hydro's Service Plan metrics, was 1.05% at the end of fiscal 2023, which meets BC Hydro's Service Plan target of less than or equal to 1.8%.

For further information, please contact Frankie Vaide at <u>bchydroregulatorygroup@bchydro.com</u>.

Yours sincerely,

Chris Sandve

F2023 Annual Reporting of Reliability Indices

Attachment 1

Distribution and Transmission Reliability Indices

This section includes the following distribution and transmission indices:

SAIFI	a measure of the number of sustained interruptions (longer than one minute) an average distribution customer will experience in a year
T-SAIFI-MI	a measure of transmission interruptions of less than one minute in duration that a delivery point experiences in a year
T-SAIFI-SI	a measure of transmission interruptions of one minute or more that a delivery point experiences in a year
T-SAIDI	a measure of the average total interruption duration, in hours that a delivery point experiences in a year
SAIDI	a measure of the amount of time, in hours, an average distribution customer is without power in a year
CAIDI	a measure of the average interruption, in hours, per interrupted distribution customer in a year
%ASAI	a measure of the percentage of time service is available in the year
CEMI-4	percentage of customers experiencing four or more outages in a year
MAIFI	a measure of the frequency of momentary (less than one minute) interruptions per distribution customer served in a year
DPUI	a measure of overall bulk electricity system performance in terms of a composite index of unreliability expressed in system minutes in a year. It takes into account all forced and planned outages except interruptions attributed to generators
SARI	a measure of the average restoration time, in hours, for each transmission delivery point in a year

As noted in Provision 9x of the F2011 Revenue Requirements Application Negotiated Settlement Agreement, BC Hydro is also reporting its CEMI-4 reliability metric, and SAIFI, SAIDI, CAIDI, ASAI, and CEMI-4 metrics normalized using the IEEE 2.5 Beta method. CEMI-4 is not benchmarked externally as utilities are at varying stages in their development of this metric.

The Canadian Electricity Association became Electricity Canada on March 1, 2022, and is therefore referred to as Electricity Canada (EC) in this Attachment. Electricity Canada restated the fiscal 2018 and 2020 reliability indices due to late data submissions for the benchmark study.

F2023	0.52	0.56	3.69	16.56	6.57	n/a	n/a	n/a	n/a	n/a		

Note: The Electricity Canada Bulk Electricity Study program reports only on forced outage results as not all the participating utilities report planned outages.

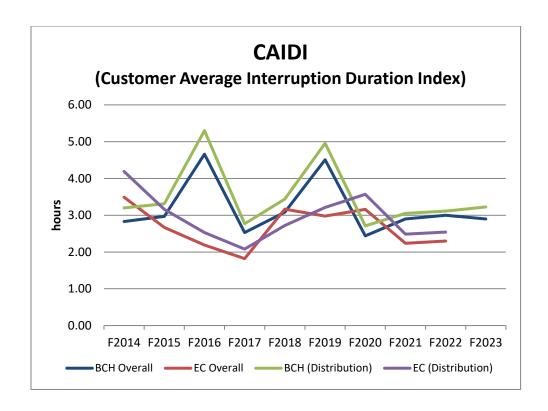

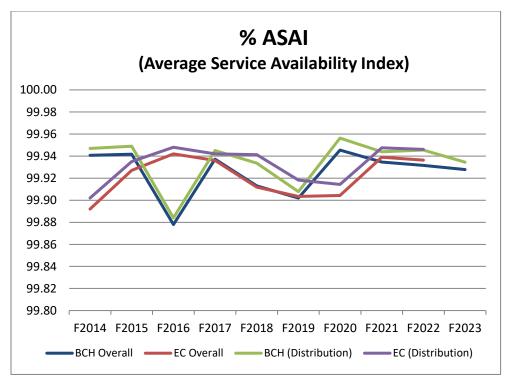

Distribution Graphs

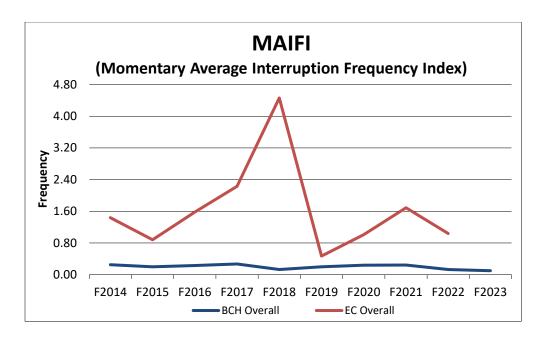

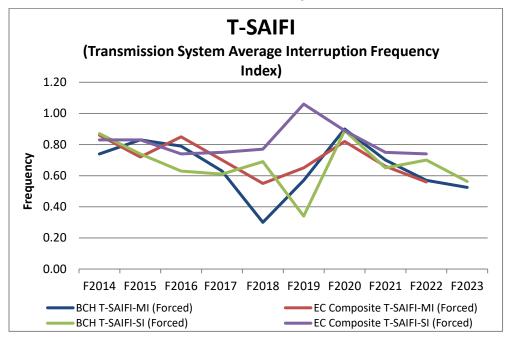

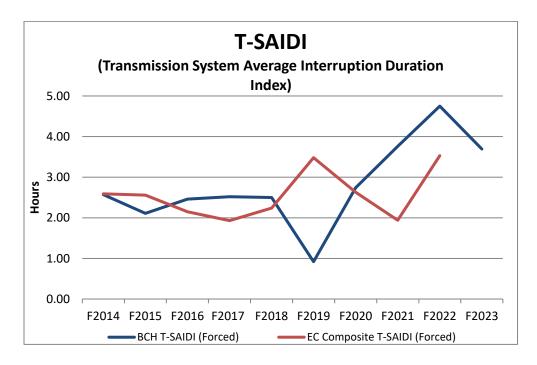

Note: The customer momentary interruptions and the resulting MAIFI may not apply to the utility's total customer population in the Electricity Canada comparison. Momentary outages are any interruptions on the feeders of less than one-minute duration, caused by disturbance on the distribution, substation or transmission system.

Definitions

Availability Factor = Operating Time + Available-But-Not-Operating Time / In Commercial Service Time Note 6

= Average Number of Forced Outages / Unit / Year (including Starting Failures)(Internal)

Forced Outage Factor

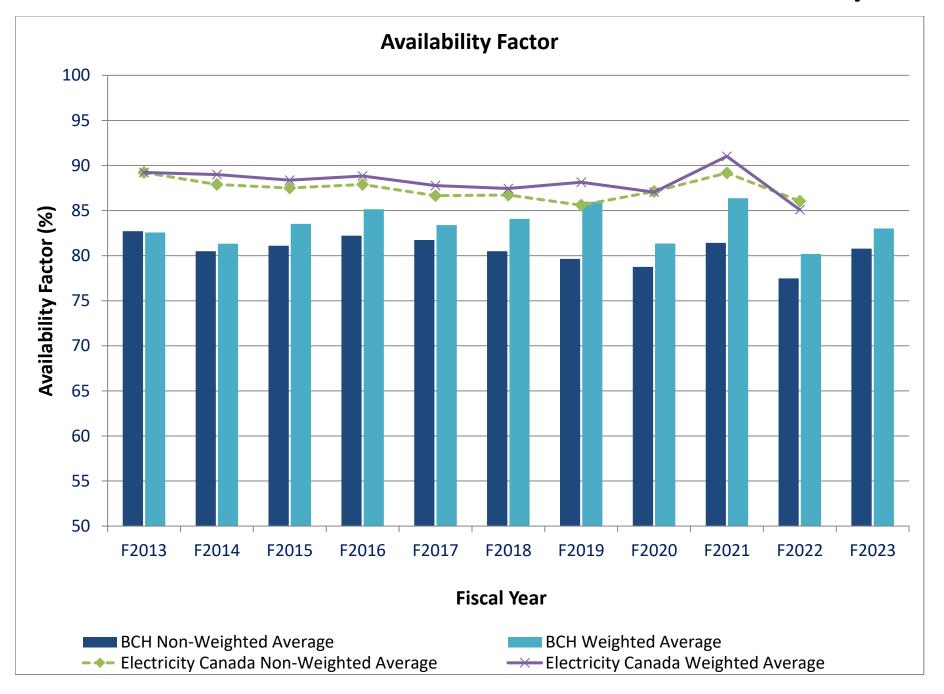

= Forced Outage Time (including Starting Failures)(Internal) / In Commercial Service Time Note 6

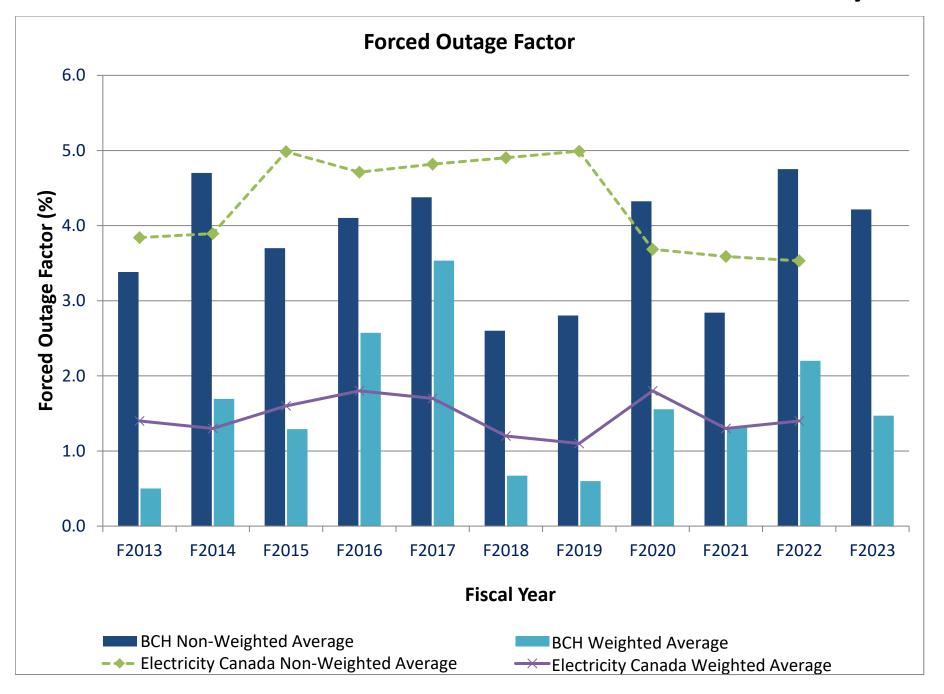

Failure Rate

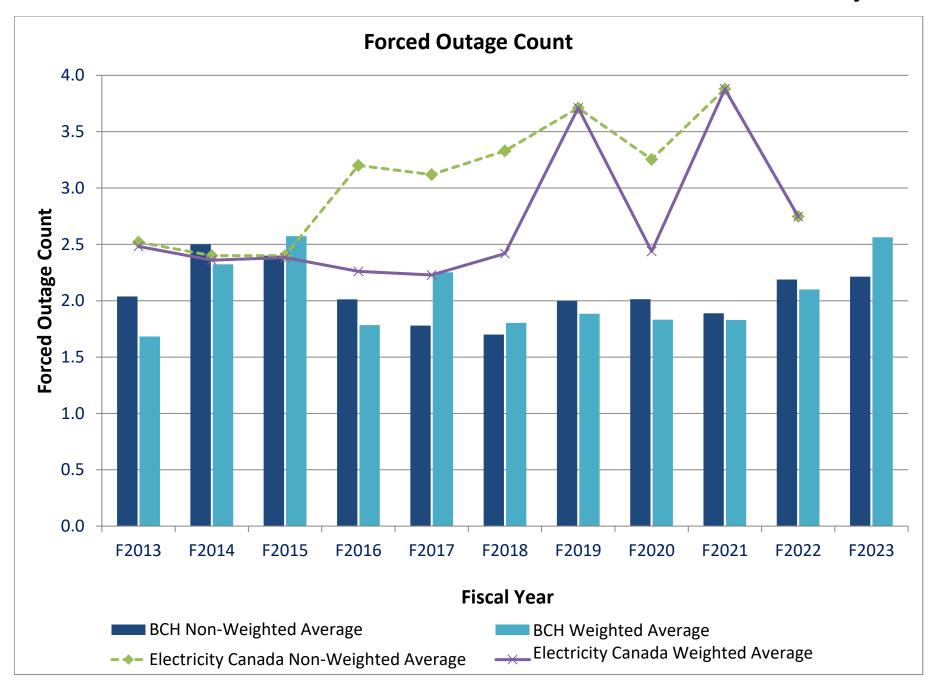

= Forced Outage Count (excluding Starting Failures)(Internal) / Operating Time X In Commercial Service Time Note 6

Notes

- 1. Outages with causes that were external to Generation, such as Transmission System forced outages, are excluded from this measure.
- 2. Data excludes ALU Unit 1 and SHU Unit 1, which have been forced out of service for an extended period.
- 3. Data excludes ALU Unit 1, SHU Unit 1 and ELK Units 1 and 2 which have been forced out of service for an extended period.
- 4. Data excludes ALU Unit 1, SHU Unit 1, ELK Units 1 and 2 and SPN Unit 1,2 and 3 which have been forced out of service for an extended period.
- 5. Data excludes ALU Unit 1, SHU Units 1 and 2, ELK Units 1 and 2, SPN Unit 1,2,3 and FLS Unit 1 which have been forced out of service for an extended period.
- 6. In Commercial Service Time represents the number of hours in the measurement period that the unit(s) were considered part of the active fleet.
- 7. Average reliability indices are weighted by unit maximum capacity rating
