Hello Brenda,

ENMAX would support the Capital Power proposal to adopt the release of unused firm transmission capacity on the AB-BC Path at T-85 (rather than the existing T-60). This change will allow for coordination with counterparties to move energy across BC Hydro's transmission system with less time constraints. We also feel this alignment across markets will enhance the use of the transmission system by our organization.

We are happy to provide more feedback if requested.

Thanks

Mark
