

Energy Efficiency Feasibility Study

MOVE FORWARD WITH CONFIDENCE ON YOUR BEST ENERGY EFFICIENCY SOLUTIONS.

Your industrial equipment and systems may be using more energy than they actually need. Our Energy Efficiency Feasibility Study provides an in-depth analysis of energy solutions within a single system.

We'll fund an energy efficiency expert to visit your site and analyze your options. In the end, you'll be able to build a solid business case for your best upgrade opportunities, using cost benefit details to improve efficiency and profitability at your facility.

Is this offer for you?

This study is for organizations that are ready to take an in-depth look at specific efficiency solutions, and carry out efficiency upgrades.

Industrial customers can take part if their target system consumes at least one gigawatt-hour of electricity per year. For a 200 horsepower system, that's roughly 6,000 hours of operation. Non-motorized systems such as lighting and process controls may also be eligible.

The offer

We provide up to 100% funding for an expert to come to your site to conduct a study of your system, and provide a detailed final report on your system's performance and upgrade options.

Your study report will equip you with everything you need to build a solid business case for efficiency upgrades, including estimated savings and implementation costs.
