

# Plant-wide audit

**Want to save energy but don't know where to start?  
We can help you with that.**

We all know that improving efficiency is a great way to save on energy costs and increase productivity. But for large industrial facilities, zeroing in on the best opportunities to save energy can be challenging. Our Plant-Wide Audit will help you figure out where to start.

An energy efficiency expert will review your consumption history and then examine your facility and your process systems. The expert will give you a breakdown of where your energy is currently going, review your current systems and equipment, and present the best opportunities to begin saving. You'll even get recommendations for low-cost or no-cost measures that can be quickly put into action to save right away.

It's a powerful first step on the road to cutting-edge efficiency—and increased profitability. And if you decide to explore in further detail, we can connect you with other program offers and expert resources to study your options in greater detail to tackle efficiency upgrades.

## Is this offer for you?

We've designed this audit for all industrial customers who use more than 2 gigawatt-hours of electricity per year.

## The offer

If you are new to energy efficiency and want to identify opportunities within your facility to be more efficient, this initiative is a powerful step forward. Once you sign up, an expert will review your energy consumption and visit your site to identify inefficiencies and opportunities.

- Up to 100% funding towards your energy audit.
- Access to an energy expert who will complete a walk-through and audit of your facility.
- A high-level report, which includes:
  - Analysis of your facility's systems and equipment, including a breakdown of the energy used within your facility and greatest areas for improvement.
  - Identification of energy efficiency opportunities and areas with the greatest opportunity for savings. This “opportunity register” will help you prioritize your next steps for achieving larger, long-term savings.
  - No-cost and low-cost tips to improve your facility's efficiency.
- A final presentation from your energy expert and BC Hydro to summarize the report findings and discuss opportunities.
