

Home Renovation Rebate Program and CleanBC Home Efficiency Rebates*

Primary heating system rebates

The rebate tables below are designed to help you determine the primary heating system rebate your customer is eligible for. Rebate eligibility is determined based on the home's primary heating system before and after the upgrade. A primary heating system is permanently installed or hardwired (in the case of electric heating systems); must serve at least 50% of the home and able to maintain 21°C for the entire heating season.

Important:

- > To calculate your potential rebate you must identify your current primary heating system, before any upgrades and the type of heating system you are installing.
- > Heat pumps must be listed on the qualified heat pump product list to be eligible for rebates. To find qualifying heat pumps, visit bchydro.com/qualifyingheatpumps.
- > Natural gas furnaces and connected thermostats, boilers, and combination heating and hot water systems must be listed on the eligible model list to qualify for rebates. To find qualifying models, visit fortisbc.com/furnace or fortisbc.com/boiler.
- > Air to water heat pumps must be listed as a qualified air to water heat pump system to be eligible for rebates. To find qualifying systems, visit betterhomesbc.ca/qualifyingairtowaterhp.
- > Customers are only eligible for one primary space heating rebate per premise regardless of the number and type of heating system upgraded.

Customers qualifying for the CleanBC Home Efficiency Rebates may be eligible for additional rebates provided by their local municipality. Visit betterhomesbc.ca/municipal-offers for a current list.

For a complete list of current rebate amounts, product eligibility, documentation requirements, and terms and conditions, visit bchydro.com/homerebates, fortisbc.com/homerebates, or betterhomesbc.ca.

Primary heating system before upgrade: **electric**

Hard-wired electric heating systems such as baseboards, radiant ceiling, radiant floors or forced-air furnace

	Primary heating system after upgrade	BC Hydro rebate	FortisBC electric rebate
	Air source heat pump		
<input type="checkbox"/>	Variable speed mini split (single head) HSPF ≥ 10.00 (Region IV), SEER ≥ 18	\$1,000	\$1,200
<input type="checkbox"/>	Variable speed multi split (multi head) HSPF ≥ 9.30 (Region IV), SEER ≥ 16	\$1,000	\$2,000
<input type="checkbox"/>	Central system (Tier 1) HSPF ≥ 8.50 (Region IV), SEER ≥ 15		\$1,200
<input type="checkbox"/>	Variable speed central system (Tier 2) HSPF ≥ 9.30 (Region IV), SEER ≥ 16	\$2,000	\$2,000

* This program is funded in part, by the Province of British Columbia and the Government of Canada.

We're working together to help B.C. save energy

Primary heating system before upgrade: **natural gas**

Boiler or furnace, hydronic and radiant heating systems

	Primary heating system after upgrade	FortisBC rebate	CleanBC rebate	Additional requirements
	Natural gas			
<input type="checkbox"/>	Natural gas furnace (95 - 96.9% AFUE)	\$800		Photo of direct vent two-pipe system and commissioning sheet required. Combination heating and hot water systems eligible for the \$300 two upgrade bonus
<input type="checkbox"/>	Natural gas furnace ($\geq 97\%$ AFUE)	\$1000		
<input type="checkbox"/>	Connected thermostat (when installed with an eligible furnace)	\$150		
<input type="checkbox"/>	Natural gas boiler ($\geq 94\%$ AFUE)	\$1,000		
<input type="checkbox"/>	Natural gas combination space and hot water heating system	\$1,200		
	Air source heat pump			
<input type="checkbox"/>	Variable speed mini split (single head) HSPF ≥ 9.30 (Region IV), SEER ≥ 16		\$3,000	Must decommission or remove gas heating system ¹
<input type="checkbox"/>	Variable speed multi split (multi head) HSPF ≥ 9.30 (Region IV), SEER ≥ 16		\$3,000	
<input type="checkbox"/>	Central system (Tier 1) HSPF ≥ 8.50 (Region IV), SEER ≥ 15		\$1,200	Must decommission or remove gas heating system ¹
<input type="checkbox"/>	Variable speed central system (Tier 2) HSPF ≥ 9.30 (Region IV), SEER ≥ 16		\$3,000	Must decommission or remove gas heating system ¹
<input type="checkbox"/>	Central System HSPF ≥ 9.30 (Region IV), SEER ≥ 16		\$3,000	Or, if gas furnace is retained as a dual fuel system ² <ul style="list-style-type: none"> • Must complete heating and cooling load calculation • Outdoor temperature switch-over control must be set
	Air to water heat pump			
<input type="checkbox"/>	Air to water heat pump		\$3,000	Must decommission or remove gas heating system ¹
<input type="checkbox"/>	Air to water heat pump combined space and hot water heating system		Up to \$4,000	Must decommission or remove gas heating system ¹ Eligible for the \$300 two upgrade bonus

Primary heating system before upgrade: oil or propane

Propane or oil-fired furnace and boilers

	Primary heating system after upgrade	FortisBC rebate	CleanBC rebate	Additional requirements
	Air source heat pump			
<input type="checkbox"/>	Variable speed mini split (single head) HSPF ≥ 9.30 (Region IV), SEER ≥ 16		\$3,000	Must decommission or remove oil or propane heating system ¹
<input type="checkbox"/>	Variable speed multi split (multi head) HSPF ≥ 9.30 (Region IV), SEER ≥ 16		\$3,000	
<input type="checkbox"/>	Central system (Tier 1) HSPF ≥ 8.50 (Region IV), SEER ≥ 15		\$1,200	Must decommission or remove oil or propane heating system ¹
<input type="checkbox"/>	Variable speed central system (Tier 2) HSPF ≥ 9.30 (Region IV), SEER ≥ 16		\$3,000	If propane system is retained as a dual fuel system ² <ul style="list-style-type: none"> • Must complete heating and cooling load calculation • Outdoor temperature switch-over control must be set
<input type="checkbox"/>	Central System HSPF ≥ 9.30 (Region IV), SEER ≥ 16		\$3,000	Must decommission or remove oil heating system ^{1,3}
	Air to water heat pump			
<input type="checkbox"/>	Air to water heat pump		\$3,000	Must decommission or remove oil or propane heating system ¹
<input type="checkbox"/>	Air to water heat pump combined space and hot water heating system		Up to \$4,000	Must decommission or remove oil or propane heating system ¹ Eligible for the \$300 two upgrade bonus
	Natural gas			
<input type="checkbox"/>	Natural gas furnace, boiler or combination space and hot water heating system	Up to \$1,700		Rebates are offered through the Connect to Gas program. Wood conversions also eligible. Visit fortisbc.com/connectogas for program details and application.

KEY REQUIREMENTS:

¹ The heat pump must replace the fossil fuel heating system and all fossil fuel heating equipment must be removed and decommissioned.

² Combination propane or gas furnace/electric heat pump systems are only eligible provided:

- i. The load calculation must be performed using program-approved methodology. Approved methodology can be found at betterhomesbc.ca.
- ii. The thermostat, outdoor temperature switch-over control must be set to the following region-specific temperatures for the duration of the product lifetime:
 - Lower Mainland and Vancouver Island regions: 5°C.
 - Southern Interior and Northern BC: 2°C;

³ Residents of Northern BC (ASHRAE Climate Zone 6, 7A, 7B or 8) with premises heated primarily by an oil furnace before the heat pump:

- i. May still use the oil furnace as a back-up heating source.
- ii. The indoor and outdoor unit(s) of the heat pump must be listed on the AHRI certifications as a matched system but the AHRI reference number need not apply to all components.

Refer to [CleanBC Home Efficiency Rebate requirements](#) for the full list.
