Dear Neighbour,

Capilano Substation Upgrade in North Vancouver

We're investing in your community to ensure the long-term safety and reliability of the electrical system. The Capilano Substation (see below) located on Woods Drive is part of our distribution system, bringing power to your home or business. The substation was built in the early 1950's and needs to be upgraded to continue providing clean and reliable power to local neighbourhoods.

A substation steps down the voltage of electricity so it can be used in your homes and businesses.

The project team is currently studying the best way to upgrade the existing substation with new equipment within the same property. This is the only alternative being studied as other alternatives would involve building a new substation at another location in the same area. Once we confirm how we can upgrade the substation, you'll be invited to a public information session on the project.

We're planning for the substation upgrade to be in-service in 2021.

In the meantime, if you have any questions or would like to be added to our email distribution list for this project, please email me at stakeholderengagement@bchydro.com or call 604 623 4472.

Regards,

Lea Anne Sexton
