

# East Vancouver Substation Project

PO Box 8910, Vancouver, B.C. V6B 4X3

We're planning to build a new indoor above-ground substation at 303 Vernon Drive to support the delivery of safe, reliable electricity to the surrounding community. The new East Vancouver Substation will eventually replace Murrin Substation on Main Street, which was built in 1947 and is nearing the end of its service life. The existing facility also doesn't meet current seismic safety standards.

The project is currently in the early design phase. Construction is expected to start as early as mid-2027 and to take approximately four years to complete.

We'll continue to share information with the community as the project moves forward and will keep you informed throughout each stage.
