

3 keys of electrical safety

Look up and down

Identify overhead and underground power lines. Follow safe work procedures at: bchydro.com/safetytraining, worksafebc.com, and bconecall.ca.

Stay back

Keep at least 10 metres back from fallen power lines. Treat all power lines as live and extremely dangerous.

Call 911 for help

Stay put and do not attempt a rescue. If your vehicle catches fire, jump clear of the vehicle, land with feet together, and shuffle 10 metres away keeping your feet close together.
